

For passenger
cars and light
commercial
vehicles

The new generation of
Brake Testers and **Test Lanes**:
Safe and **precise** testing

BOSCH

Invented for life

Automatic and reliable:

Brake tests with the highest possible precision

Brake testers and test lanes for passenger cars, delivery vans and light commercial vehicles

- ▶ BSA 42xx – the entry level brake tester
- ▶ BSA 43xx – the universal brake tester
- ▶ SDL 43xx – the extension to a test lane for brakes, suspension and track
- ▶ BSA 436x – the brake tester for extra-wide vehicles
- ▶ BSA 44xx – the brake tester for light commercial vehicles

BSA series and SDL series: Brake service from Bosch

Complete brake tester and expandable module

For all brake tests: The test lane from Bosch

New brake service requirements

Increased equipping of vehicles with electronic systems like all-wheel drive, electronic parking brake and also electronic brake control systems presents the workshop with new challenges in the area of brake service. In order that the electronic system can fulfill its task, all hydraulic and mechanical components must interact perfectly. This is why system expertise, efficient diagnostics and information systems play a constantly increasing role. Electronics is the key to correct repair and maintenance of the braking systems of modern vehicles.

Comprehensive support from Bosch for brake business

Irrespective of whether brakes are tested in an independent workshop or during the general inspection – suitable brake testers/test lanes from Bosch can be set up according to individual requirements.

As your workshop partner, Bosch supplies everything required for brake system service:

- ▶ The most up-to-date brake testers and test lanes are continuously developed and adapted to the widest possible variety of workshop requirements
- ▶ High-quality brake service thanks to
 - optimized interaction of modern brake testing technology
 - comprehensive workshop information
 - superior quality of Bosch brake parts

All advantages of the BSA series at a glance:

Fast and precise measured results thanks to innovative technology

- ▶ Automatic or manual operation
- ▶ With infrared remote control
- ▶ Fully automatic, microprocessor-controlled test procedure, measured value processing and display
- ▶ Fast-reacting, precise measuring system DMS (strain gauge)
- ▶ Space-saving mechanical system through integrated control and power electronics
- ▶ Sensor rollers for slip control and safety monitoring

Networking through the latest computer technology for a good overview

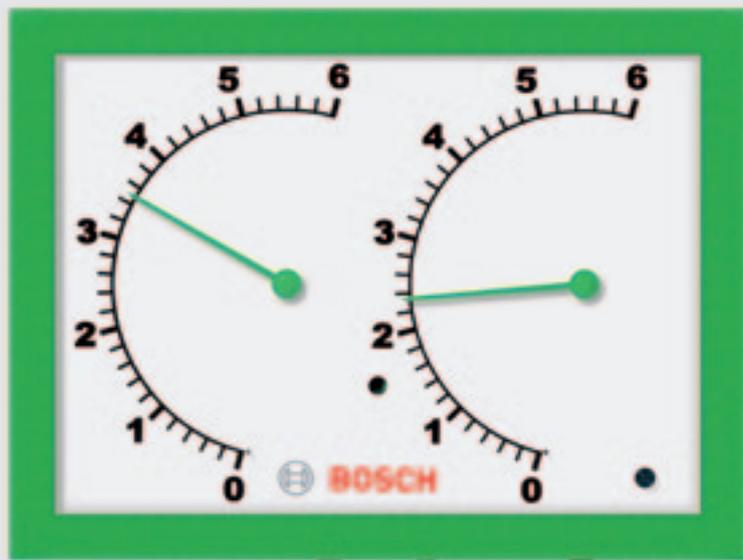

- ▶ The Data Exchange Platform networks the Bosch workshop equipment for efficient data exchange
- ▶ BNet technology for networking with several workshop PCs and ASA network
- ▶ Analog parallel displays with integrated electronics
- ▶ LED lamps for displaying super automatic/automatic/manual operating mode

Long life thanks to highest quality standards

- ▶ Hot-dip galvanized roller sets and brake rollers with plastic-corundum coating (coefficients of friction from 0.8 [dry] and 0.7 [wet])

Efficient and precise – BSA 42xx:

Brake testing for passenger cars and delivery vans

The BSA 4210 is delivered as standard series with a rectangular parallel display and wall mounting set

BSA 42xx – innovative and economic

Economic operation is the decisive positive factor of the BSA 4210:

- ▶ Fast, simple and precise:
 - Testing of braking systems of passenger cars and delivery vans with a permissible total weight of up to 5 t
 - Automatic, or optional manual operating mode via infrared remote control
- ▶ Long service life, even outside:
 - Frame and cover of roller set hot-dip galvanized
 - Brake rollers reinforced with expanded metal and with plastic-corundum coating, which is easy on the tires
- ▶ Perfect preparation for the customer discussion. Test results of repair, service and maintenance tasks on the braking system can be printed out on the optionally available printer
- ▶ The analog display can be screwed onto the wall using the assembly set included in the delivery

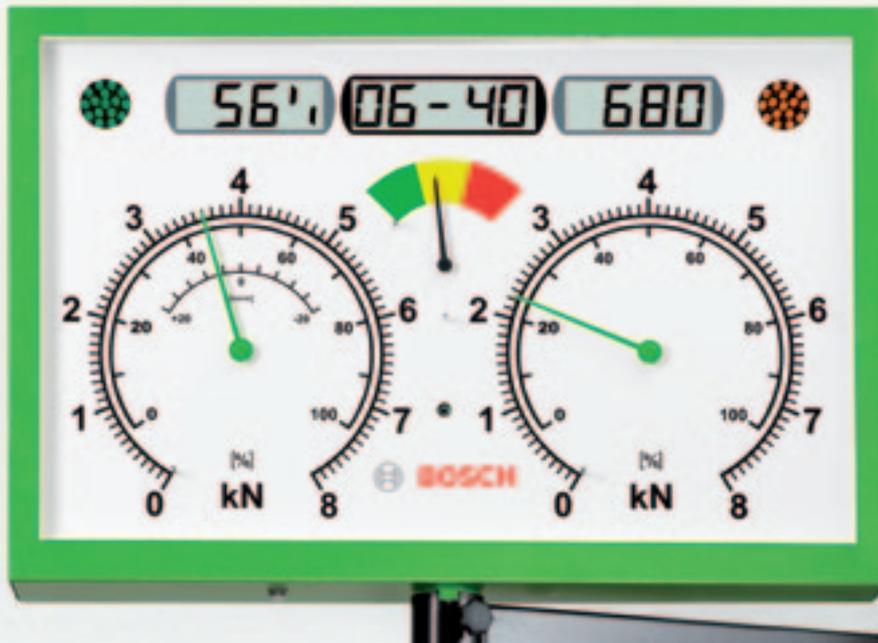

Fully automatic test procedure: Nonstop precision

The fully automatic test procedure starts with running into the roller set, which is connected to the innovative power electronics. Safe operation is guaranteed by the antilock braking system shutoff, automatic restart and saving of the braking force display. The measured results can always be viewed on the analog parallel display.

Description	Order number
BSA 4210 S4 Roller set Rectangular analog display	1 691 500 100
BSA 4210 S40 Roller set Rectangular analog display, plug-in roller cover plates	1 691 500 130
Technical data BSA 42xx	
Maximum test load/axle	2.5 t
Maximum overdrive load	4.0 t
Engine power	2 x 2.0 kW
Test speed	2.5 km/h
Display range	0 – 6 kN
Nominal measurement range	6 kN
Minimum track width	800 mm
Maximum track width	2,200 mm
Roller length	700 mm
Roller elevation	25 mm
Dimensions (W/L/D) in mm	2,360/660/250
Weight approx.	420 kg
Special accessories BSA 42xx	
Wall mounting for rectangular analog display	1 691 400 004
Edge protection frame	1 691 602 000
Roller cover plates swivelable, hot-dip galvanized	1 691 601 011
Roller cover plates plug-in, hot-dip galvanized	1 691 601 010
BNet printing and archiving software	1 691 701 106
Printer set BNet device bus	1 691 601 026
Printer cabinet	1 691 602 010
Infrared remote control	1 691 601 004
Pedal force sensor	1 691 601 020

Brake tester BSA 43xx:

All measured values at a glance

Analog display unit BSA 43xx series

Whereas the BSA 42xx series has established itself as an entry to brake testing, the BSA 43xx series has further valuable functions that makes it a brake testing expert:

- ▶ For testing brakes on passenger cars and light commercial vehicles
- ▶ Extension to a complete test lane possible
- ▶ Selectable display: Analog stand column, analog wall mounting or PC visualization
- ▶ All-wheel drive version available
- ▶ "High-speed test" version available

Robust, durable and capable of meeting all daily workshop demands:

- ▶ Fully hot-dip galvanized, compact operating units
- ▶ Brake rollers reinforced with expanded metal and with plastic-corundum coating, which is easy on the tires
- ▶ To optimize the roller force, the rear test roller is raised 25 mm
- ▶ Powerful and robust motors and gear for challenging applications

All measured values at a glance

- ▶ Multifunctional, easy to read, swivelable and rotatable display unit
- ▶ Three types of measured value information: Via a green / yellow / red evaluation scale, from a pointer on the analog display and, finally, via the LCD display (standard series with BSA 43xx) for additional information on the braking factor in %, axle load in kg and ovality of the brakes
- ▶ Measured results are saved automatically and can be printed out by a print command via the standard series infrared remote control

Standard series super automatic mode or operation with infrared remote control

"Super automatic operation" guarantees the menu-guided sequence of the entire test procedure. After the start, the computer controls all test phases fully automatically, saves the data and provides information on how to move on. The automatic drive-out support via the electromagnetic brake of the test rollers (integrated with BSA 434x) ensures that driving out is particularly gentle. Duration of the complete procedure: Approx. three minutes with automatic data archiving and optional printing function. And all of this without having to press a single button. All brake tester models can be equipped with an interface for printing and archiving software (BNet-PC software) as an option and are thus compatible with every modern Windows PC.

Brake tester BSA 43xx:

Item by item for more test convenience

PC cabinet BSA 555 in conjunction with the roller set

The rear test roller raised as standard series ensures good traction

Test program for electronic parking brakes

More and more vehicles are equipped with an electronic parking brake. Simply use the test program integrated as standard in all BSA 43xx models to check the parking brake in accordance with the manufacturer's specifications.

Automatic all-wheel drive detection

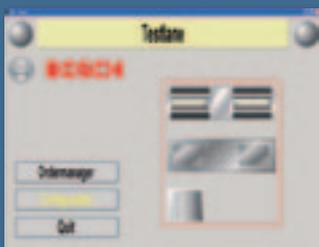

The number of all-wheel drive vehicles in the workshop is also increasing. For every all-wheel drive vehicle, the BSA 434x series offers as standard the automatic all-wheel detection with direction of rotation reversal when starting the roller sets. Damage to the powertrain in the vehicle is thus avoided.

No connection restrictions to your PC network

Thanks to the BNet device bus, the connection options in the BSA 43xx series are almost unlimited. By connecting to your workshop PC, you can create a network solution using the workshop software or the ASA network manager for the entire testing and workshop area. Whether for order handling, statistics evaluation or printing out the test records: The measurement results of all connected testers (brake test, suspension test, track test, wheel alignment, emission test or head light test) are available to your PC network. This makes order handling more efficient than ever before.

Overview of the additional options for PC visualization:

- ▶ BNet database
- ▶ BNet order manager (customer and vehicle data)
- ▶ BNet print manager (test records)
- ▶ BNet archive manager (statistics and history)

Comprehensible graphical PC display, easy to understand. All information clearly arranged in the graphic printout. The customer can select between three different printout types: Standard printout, curves printout and graphic printout.

Test reliability preprogrammed

with analog display and PC visualization

The analog display can be installed according to customer wishes by means of a wall mounting and swivel arm (BSA 433), or by an aluminum stand column (BSA 437)

SDL 120: USB converter set for connection to a customer PC

SDL 43xx: The complete test lane for brakes, suspension and vehicle track

Complete: Modern passenger car brake testing system, test lane SDL 43xx

The components of the SDL 43xx series from Bosch can be easily used to extend the brake testers to a complete test lane. For example, it is possible to integrate a side slip tester SDL 415, a side slip tester with track compensation tester SDL 425, a suspension tester SDL 430 or a suspension tester with noise diagnostics SDL 435.

- ▶ Connection option for additional test components and clearly arranged PC visualization through a BNet device bus integrated as standard series
- ▶ Special advantage: You do not need any additional display units to do this
- ▶ Fast and clearly arranged acquisition of the measuring data
 - via analog display and integrated LCD display (SDL 433x)
 - via 19" TFT color monitor on the PC cabinet BSA 555

SDL 415 side slip tester	
Order number	1 691 630 301
Maximum test load	2.0 t
Maximum overdrive load	4,0 t
Display range	+20 to -20 mm/m
Dimensions (W/L/D) in mm	750 / 480 / 35
Force transducer	waterproof DMS sensor

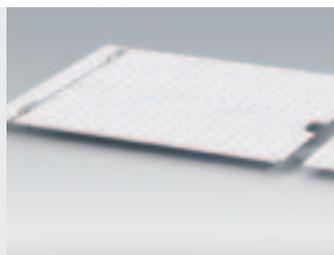

SDL 425 side slip tester with track compensation tester	
Order number	1 691 630 303
Maximum test load	2.0 t
Maximum overdrive load	4,0 t
Display range	+20 to -20 mm/m
Dimensions (W/L/D) in mm	1,100 / 440 / 35
Force transducer	waterproof DMS sensor

SDL 430 suspension tester	
Order number	1 691 620 300
Measurement principle	EUSAMA
Engine power	2 x 2.5 kW
Maximum test sequence	25 Hz
Stroke	6 mm
Test load	2.0 t
Overdrive load	4.0 t
Dimensions (W/L/D) in mm	2,360 / 440 / 280

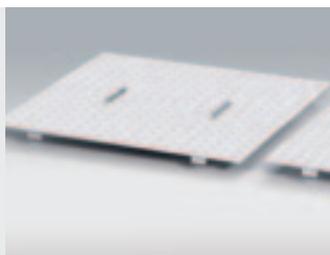

SDL 435 FWT / noise diagnostics	
Order number	1 691 620 301
Measurement principle	EUSAMA
Engine power	2 x 3.0 kW
Maximum test sequence	10 to 30 Hz also with frequency converter
Test load	1.65 t
Overdrive load	4.0 t
Dimensions (W/L/D) in mm	2,360 / 440 / 280

BSA and SDL:

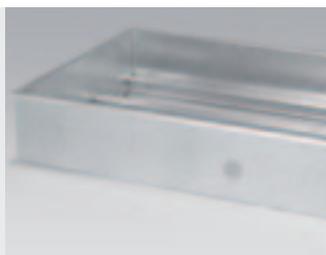

Fully networked and expandable

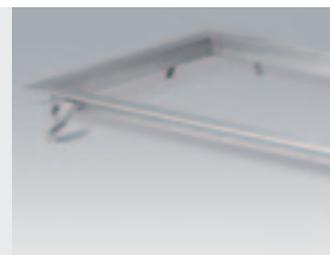

Swivelable cover plates for the roller sets of the BSA 43xx series

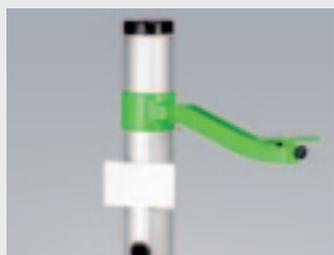

Plug-in cover plates for the roller sets

Assembly case for simple installation of the test lane SDL 43xx

Edge protection for neat installation of the roller sets

Aluminum stand columns for the BSA 44xx

BNet printer set with remote control

Cabinet for correct printer accommodation

Axle load scales with four sensors

BSA 436x and BSA 44xx: High-precision brake testing of light commercial vehicles

Thanks to the extra-wide roller set, vehicles with twin tires can also be easily measured

New! Data Exchange Platform DXP – the efficient workshop software from Bosch

- ▶ Networking of all diagnostic devices
- ▶ Fast, simple, reliable data exchange between all PC-based testers in the workshop
- ▶ Direct activation of the ECU diagnosis (KTS) from every DXP-networked test system
- ▶ Central storage of identification data and result records and exchange with the Workshop Management System (WMS)

Once recorded – accessible at any time, and everywhere

DXP from Bosch transfers all vehicle data recorded by a system to all other diagnostic systems integrated in the DXP network. Once identified, input of the license plate number or VIN (Vehicle Identification Number) is sufficient to call up the vehicle data at all workstations. This saves time. All testers from Bosch, Beissbarth and Sicam have networking-capability.

The software can be installed on every workshop PC with at least 2 GB main memory, a 150 GB hard disk, and Dual Core processor.

Ideal for delivery vans and light commercial vehicles

The brake testers BSA 436x and 44xx allow you to obtain automatically controlled, precise measured values within a few minutes in brake tests on all vehicles with a track width of up to 2.8 m. For example, on delivery vans with twin tires, heavy mobile homes or light commercial vehicles up to 10.0 t.

BSA 436x

Efficient, high-precision brake testing:

- ▶ For vehicles up to 2.5 t axle load and track widths of 800 – 2,800 mm
- ▶ Automatic all-wheel drive detection
- ▶ Test program for electronic parking brakes; with electromagnetic drive-out support and super automatic mode
- ▶ Braking force difference at a glance through 3-fold parallel analog display with additional evaluation scale
- ▶ LCD display shows program status, axle weight and braking factor in %
- ▶ Extension to complete test lane possible (only with BSA 436x)
- ▶ Networking with workshop PC possible through BNet device bus

BSA 44xx

The BSA 44xx series is based on the BSA 436x series but achieves even more:

- ▶ Suitable for 2-axle vehicles up to 10 t permissible total weight

BSA 436x and BSA 44xx: Brake testing perfectly under control up to 5 t axle load

The BSA 436x series is delivered as standard series with a rectangular analog display

The BSA 44xx series is delivered as standard series with an oval analog display (with range switching)

Bosch: bringing you the workshop of the future

For over 120 years, Bosch innovations have been keeping vehicles on the road and getting people to and from their destinations while improving safety and peace of mind along the way.

Bosch Automotive Aftermarket offers workshops and retailers a comprehensive portfolio of products that is unmatched worldwide:

- ▶ Efficient diagnostics
- ▶ Innovative workshop equipment
- ▶ Quick, reliable delivery
- ▶ The world's most comprehensive range of spare parts – including both new and remanufactured
- ▶ Workshop concepts to meet every requirement
- ▶ Comprehensive training
- ▶ Targeted sales and marketing support
- ▶ A competent service hotline
- ▶ 24-hour online workshop services
- ▶ Affordable leasing services for workshop equipment and software

From parts to scheduling, organization and results, our solutions are combined with additional services to ensure your needs will be perfectly met, helping you to maximize your potential.

Workshop tip:

The professional braking system analysis is perfectly supplemented by the complete passenger car brake program from Bosch.

Diagnostics and parts: you only find both at Bosch.
